Summary

Detail-oriented Computer Science and Engineering graduate with a strong technical foundation in Python Backend development and Cloud Engineering. Proven ability in architecting robust, scalable backend solutions using Flask, FastAPI, and MongoDB, complemented by responsive frontend integration. Adept at deploying cloud services on GCP, optimizing web applications, and collaborating effectively in fast-paced tech environments

Skills

- **Languages:** Python, Java, C
- **Frameworks:** Flask, FastAPI, Bootstrap
- **Databases:** MySQL, MongoDB
- **Cloud & API Services:** Google Cloud Platform (GCP), RESTful APIs, API Integration
- **Web Deploy & Optimize:** Google Search Console, Website Indexing, Site Verification
- **Tools & Platforms:** Git, GitHub, VS Code, Postman, Conda, MS Excel, PowerPoint
- **Soft Skills:** Problem Solving, Adaptability, Teamwork, Creativity, Strategic Thinking

Experience

- **Backend and Cloud Engineer** - Freelance (Hybrid) ([View](#)) *Duration: Jul 2025 – Present*
 - Cybersecurity and Media tec - Location: Chennai, Tamilnadu
 - Collaborated as a freelance engineer specializing in secure architecture and cloud infrastructure deployment.
 - Designed and refined secure backend systems and API layers using Flask, reducing data vulnerability parameters by **40%**.
 - Managed cloud deployment strategies, multi-cloud API transfers, and security protocols, reducing cross-platform transfer latency by **25%**.
- **Full Stack Developer** - Intern (Remote) ([View](#)) *Duration: Dec 2024 – Feb 2025*
 - UniConverge Technologies - Location: Noida, Uttar Pradesh
 - Served as a full-stack intern role contributing to the end-to-end development of web-based marketplace applications.
 - Developed secure, role-based access architectures and custom seller dashboards, improving inventory tracking efficiency by **20%**.
 - Engineered dynamic user interface components and streamlined frontend UI, improving page-load speeds by **15%**.

Technical Project

- **Fragment Safe** – Cloud Security & File Encryption Platform ([View](#))
Python | Flask | GCP | MongoDB | Bootstrap | Cryptography (AES/Blowfish) | RESTful APIs
 - **Dual-Layer Cryptography:** Architected a secure storage platform utilizing Flask and sequential AES + Blowfish encryption , reducing data vulnerability parameters by **40%** to maximize file data protection.
 - **Multi-Cloud Integration:** Distributed a secure backend system via Google Cloud, Dropbox, and Box APIs, cutting data transfer latency by **25%** during authenticated, cross-platform data transfers.
 - **Fault-Tolerant Erasure Coding:** Implemented a custom algorithm to shred encrypted payloads into discrete, recoverable fragments distributed across cloud environments, achieving a **99%** data recovery success rate.
 - **Full-Stack Dashboard:** Built a responsive UI with MongoDB to manage secure user authentication, session state, and real-time activity logs for up to **1,000+** simulated active user sessions.
- **Global Mart** – Multi-Vendor E-Commerce Platform ([View](#))
Python | Flask | MongoDB | JavaScript | HTML5 | CSS3 | Bootstrap
 - **Role-Based Access Control:** Conceptualized a full-stack e-commerce web application utilizing Flask to support distinct dashboards for buyers and sellers, improving access security compliance by **30%**.
 - **Inventory Management:** Engineered independent seller dashboards enabling users to dynamically manage listings, track products, and update stock, which optimized real-time inventory tracking efficiency by **20%**.
 - **Unified Marketplace UI:** Designed a responsive buyer marketplace using JS and CSS, improving frontend page-load speeds by **15%** to deliver a seamless product-browsing experience.
- **Daily Journal Manager** – Command-Line Diary System ([View](#))
Python | File I/O | Datetime Modules | Command-Line Interface (CLI) | CRUD
 - **CRUD Functionality:** Created a lightweight CLI tool to seamlessly create, read, and delete private diary entries.
 - **Persistent Storage:** Utilized File I/O operations to securely save and manage data locally in plaintext formats, reducing application memory usage while maintaining data persistence.
 - **Error Handling:** Implemented strict input validation to process user commands smoothly and prevent system crashes.

Education

- **B.E – Computer Science and Engineering | 2025 | CGPA : 8.1**
Aalim Muhammed Salegh College of Engineering |Avadi,Thiruvallur
- **HSC – Maths with Computer Science | 2021 | Percentage : 86%**
Raj Vidyalyaya Matriculation Higher Secondary School | Kuttalam – Mayiladuthurai

Certificate

- JPMorganChase - Software Engineering Job Simulation ([View](#))
- Python Fundamentals – Eduprep([View](#)) ,Guvi ([View](#))
- Python Full Stack Development – Besant Technologies ([View](#))
- MongoDB – Smart Internz ([View](#))
- Cybersecurity – IBM SkillBuilds ([View](#))
